

Mammut Hydraulic Jacks

Larzep is proud to announce the release of a new range of heavy tonnage telescopic air hydraulic mobile jacks for mining and other heavy duty vehicle maintenance applications. The Mammut jacks, using air power, make easy work of lifting heavy mining vehicles. The Mammut heavy vehicle air hydraulic jacks are made in Europe and have been specifically designed for Australian conditions.

Mammut models include 60T and 80T capacity with two and three stage telescopic lift which allows a low collapsed height yet provide a large amount of stroke (lifting height). These rugged jacks are fitted with self sealing pneumatic tyres for easy manoeuvrability and have high clearance to make them suitable over rough terrain.

The Mammut jacks are fitted with a super quiet air/hydraulic pump (60 dB). In the event of an air supply failure or situations where air is not available, the units can still be operated by attaching a hand or electric pump.
